NHL and German National Team player, Christoph Schubert

What players say about RapidShot

"I train nearly daily at the new RapidShot. I believe that this training brings something special to my routine and moreover, it's fun!"
Christoph Schubert, NHL

"Last year I got three goals all season. This year I already have 3 goals in 6 games." Trevor, Kitchener

"We don't get enough ice time in Senior A, so RapidShot is a great way to stay sharp between games!" Tom, Ontario Senior A

What Is RapidShot?

Scoring records available on-line to all members

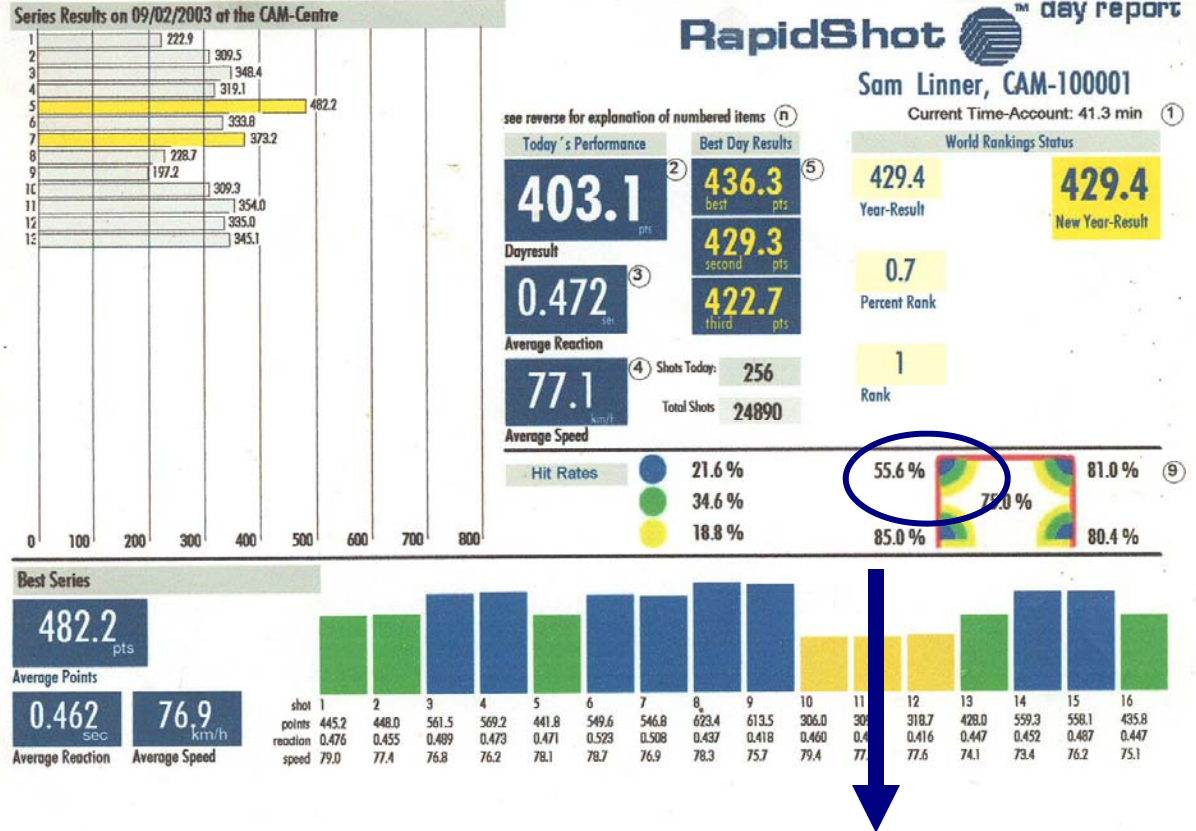

RapidShot is a patented hockey shooting system. Think of it as a batting cage for hockey players! The built-in RapidShot technology records reaction time, speed and accuracy.

It is well documented that learning only occurs with feedback. The ability of the muscles to develop a skill - sometimes referred to as “muscle memory” - is based on repetition. The RapidShot System is designed around these principles.

The RapidShot system is a computerized, puck-feeding and retrieval system, with automatic data collection.

Additional Features:

- Programmable, including “Stick Testing Mode”
- Variable pass speeds for multiple skill levels
- Sophisticated Smart Card control
- Worldwide, internet ranking system
- Computer controlled

Add Value To Your Training

- Improve your performance as you monitor your shooting stats
- Enter world rankings for your age
- Maximize hockey specific dry land training
- Identify areas of strength and weakness by target location

“You Can’t Hide!”

Data is collected and immediately fed back to the shooter or coach after each session. In fact, the entire day’s results can be fed back via a score card, as shown.

Note this player’s accuracy scores in the top left corner!
